

Comments for L106P-LUC in pENTR1A
4262 nucleotides

rrnBT1 transcription termination sequence: bases 106-149
rrnBT2 transcription termination sequence: bases 281-308
attL1: bases 358-457 (complementary strand)
FKBP L106P domain: bases 494-817
Firefly luciferase ORF: bases 824-2476
attL2: bases 2491-2589
Kanamycin resistance gene: bases 2713-3522
pUC origin: bases3586-4259

Recommended *E.coli* strain for propagation: TOP10F' under kanamycin selection.

NOTE: The position of the genetic elements is approximative.

Eric Campeau January 2008
